

## How to set up Live Results on a slave monitor with Windows 7

1. Attach the monitor to the laptop.
2. Right click on the desktop.
3. Click on Screen Resolution.
4. The display shows “Change the appearance of your display” like this:

5. Change Multiple displays from “Duplicate these displays” (shows same on both screens) to “Extend these displays” (treats the two displays as one very wide display). Screen now looks like this, with the laptop on the left and the slave monitor on the right:

6. If you want the laptop on the right and the slave monitor on the left, drag one of the images 1 and 2 into the position you want it.
7. Now click OK, then click “Keep changes”.
8. Start up a second instance of Autodownload, then set it running Live Results.
9. Drag the Live Results instance onto the slave monitor (to the right or left of the laptop display, depending on how you have set it up). You will see it move off the laptop display and onto the slave monitor.
10. Now you can move the slave monitor to where you want the competitors to view it, and get on with your other Autodownload work on the laptop display.
